

REV LNG

REV LNG (REV) is a full service Liquefied Natural Gas (LNG) distribution and logistics company with proven expertise in supply chain management. Located strategically in the heart of Pennsylvania's Marcellus Shale region, REV utilizes a vertically integrated or "Well to Wheel" model to serve a variety of customers in the eastern half of the United States. REV specializes in LNG transportation and storage solutions across a wide variety of markets, including: power generation, oil & gas, manufacturing, mining, agriculture, utilities, and fleet vehicles. The Company was

founded in March 2013 and became an early adopter which utilized LNG as an alternative fuel; transitioned its own diesel Class 8 truck fleet to LNG and became one of the largest LNG powered fleets in North America. In late 2015, LNG was identified as viable solution for utility and power generation companies seeking backup power options to avoid non-performance penalties for power supply interruptions or lack of pipeline capacity. REV has developed a best in class comprehensive LNG storage & vaporization solution designed to serve as a backup fuel and provide excess gas pressure. Currently we have multiple projects in various stages of development in the Mid-West and Eastern United States.
