

Tangibl

Tangibl is an engineering-based professional services firm originally founded in 1988. We understand what our Clients value, which is why they've stayed with us over the years. A key attribute that separates Tangibl from the rest of the pack is **OriginalThinking**SM. In the infrastructure-intensive world of our Clients, **OriginalThinking**SM means getting the job done using innovative methods and technologies, and challenging conventional approaches to problem-solving. Tangibl strives to apply **OriginalThinking**SM in everything we do.

Organized electricity markets bring benefits to all participants, but they can also pose challenges to incumbents as well as new entrants. With our experience in state and federal regulatory proceedings, emerging ownership models for electric transmission and new entrants in power generation, Tangibl is your sole source for expertise in regional transmission organizations such as PJM, ERCOT, New York ISO and ISO New England. Our Managers participate in relevant stakeholder processes and will be your advocate for fair treatment of participants in organized electricity markets.
